

Clean Water State Revolving Fund (CWSRF) Eligibility

- Improvements to POTWs to manage flowback fluid are considered a CWA Section 212 pretreatment project.
- Eligible CWSRF POTW devices/systems include storage, treatment, recycling or reclamation of industrial discharge.
(Where feasible, such facilities should be part of a larger system to treat domestic wastewater).
- CWSRF assistance may also be provided to municipalities to construct separate facilities to treat industrial liquid waste. These facilities are to be operated and located at the municipal industrial operation site.
